

"FLOW Baltic" EUSBSR PA Agri flagship

Strategic approach to reduce diffuse source nutrient loads and support sustainable agriculture and bioeconomy with a focus on agricultural water flows

Measures

- Field interventions in intensive and sensitive areas
 - Controlled sub-surface drainage, recycling of drainage water for irrigation and bi-production (flat fields)
 - Integrated (multi-functional) buffer strips/zones (sloped fields)
- Landscape interventions
 - (re)meandering
 - Wetlands
 - Bottom dams, sedimentation ponds
 - 2-stage ditches
- Monitoring
- Spatial planning
- Cooperation
