

Document title	Correction factors for biota threshold values
Code	13-1
Category	DEC
Agenda Item	13
Submission date	21.3.2019
Submitted by	Sweden
Reference	

Background

The topic of correction factors for hazardous substance threshold values in biota, including trophic position conversions factors, was raised at EN-HZ 9-2018 and discussed during the preparation of the [State of the Baltic Sea report](#). It was noted that it is an aspect that needs further development. To support the discussion three attachments are provided in the [document library](#) on the EN-HZ 10-2019 meeting site. The documents provided include:

1. [Document 13 Att.1 Rapport Conversion factors for metals between liver muscle and wholebody in perch](#)
2. [Document 13 Att.2 2014 Faxneld Distribution of PFAS in liver and muscle of herring](#)
3. [Document 13 Att.3 Danielsson et al 2018 Distribution of contaminants in different fish tissue final](#)

The third document is the same document provided to EN-HZ 9-2018.

Action requested

The Meeting is invited to take note of the information provided and discuss the topic with a view to proposing ways to further the approach appropriately for future assessments.
