

Baltic Marine Environment Protection Commission

Making the HELCOM eutrophication assessment
operational (EUTRO-OPER)
Meeting, 24-25 November 2015

EUTRO-OPER 7-2015

Document title	EUTRO-OPER Project report, draft
Code	3-2
Category	CMNT
Agenda Item	3 – The deliverables of EUTRO-OPER
Submission date	17.11.2015
Submitted by	Secretariat
Reference	6-2015

Background

In the project description, the EUTRO-OPER project has been tasked to prepare manuals / guidelines for specific products used in the eutrophication assessment information flow. EUTRO-OPER 6-2015 proposed, in order to keep the manual concise, additional information and results from testing will be collected into a project report. The first draft is presented to the Meeting.

Action required

The meeting is invited to work together to finalize the draft.

The first version of the draft EUTRO-OPER project report may be found at the 'EUTRO-OPER Project report' workspace in the HELCOM Meeting Portal: <https://portal.helcom.fi/workspaces/EUTRO-OPER-104/default.aspx>.

The first outcome for Chapter 8, 'Test Assessment', will be presented to the meeting separately.

Chapter 9, 'Future needs of the HELCOM eutrophication work', will be discussed in the meeting separately (Doc. 3-3).

The outline of the project report:

1	Introduction of the EUTRO-OPER project	3
2	Toward harmonization of coastal and open-sea assessment	4
	2.1 Introduction to assessment tools presently used in the Baltic Sea	5
	2.2 Testing HEAT 3.0 in coastal areas	14
	2.3 Proposal	34
3	Visualizing distance to target	34
	3.1 Determining the approach	35
	3.2 Defining the chosen approach: MSFD classification combined with information on distance to GES	39
	3.3 Proposal	44
4	Including new data types to indicator update	44
	4.1 Comparisons between EO and monitoring station data	45
	4.2 Subdivision of EO data on HELCOM assessment areas using HELCOM grids	54
	4.3 Approaches for combining different data types to update a single indicator: example chlorophyll-a	55
	4.4 Proposal	57
5	Improving the core indicator reports	63
6	Developing and testing potential new eutrophication indicators	78
	6.1 New Pre-CORE indicators on total nutrients	78
	6.2 New pre-core indicators on phytoplankton	82
	6.3 New candidate indicator on oxygen consumption	88
	6.4 Alternatives for finding a common oxygen indicator in shallow waters	95
	6.5 The relevance for eutrophication of indicators developed under other HELCOM projects	110
7	Developing assessment data and work flow	111
8	Test assessment	116
9	Future needs of the HELCOM eutrophication assessment work	117
