This document has been revised based on input from GEAR 20-2019. Revisions are presented in track changes.

Background

The current Terms of Reference (ToR) for the HELCOM expert network on Economic and Social Analyses (EN ESA) were agreed by HELCOM 38-2017 ([Outcome of HELCOM 38-2017](#), para. 4.37). They describe the rationale, aims, tasks and working procedures of the network.

An update to the ToR was requested by HOD 55-2018 ([Outcome of HOD 55-2018, para. 3.25](#)) to account for the work planned for the update of the HELCOM Baltic Sea Action Plan. This request was taken up at EN ESA 2-2018 ([Outcome of EN ESA 2-2018, para. 9.1](#)) and completed by correspondence.

Proposed changes to the current ToR are highlighted in yellow.

Action requested

The meeting is invited to consider and agree on the updated Terms of Reference for the HELCOM expert network on Economic and Social Analyses.

HELCOM expert network on Economic and Social Analyses

Updated Terms of Reference (ToR)

Rationale

Economic and social analyses (ESA) are needed to fully apply ecosystem-based management in the Baltic Sea and to support the sustainable use of marine resources. The need for further development of ESA has been a highlighted commitment, for example, in the Ministerial Meeting in 2013. The ESA provide a set of tools for examining e.g. the benefits from the use of marine waters, and the costs and benefits of achieving a healthy marine ecosystem. Economic and social analyses contribute to ecosystem-based marine management, marine spatial planning, pollution mitigation, and integration and implementation of policies.

Overall aims and tasks

The overall aim of the expert network on economic and social analyses is to enhance the regional cooperation on the economic and social analyses related to the Baltic Sea marine environment. This will contribute to using comparable data and approaches across countries. The analyses will support the implementation of the HELCOM Baltic Sea Action Plan, including maritime spatial planning, and other policies in the Baltic Sea region, notably EU Marine Strategy Framework Directive¹ by the HELCOM EU countries.

The network will serve as a platform for discussion and information exchange on the ongoing and planned ESA work, and it will act to develop and agree on regional approaches for ESA. The work will be set up to support both regional and national ESA work to fulfil HELCOM and other commitments of the Contracting Parties. The network will contribute to the implementation of the HELCOM Roadmap on economic and social analyses.

More specifically, the network will:

For the update of the HELCOM Baltic Sea Action Plan in 2019-2021, actively contribute to:

- The development of regional business-as-usual (BAU) scenarios to be used as baseline of the future development in the state of the Baltic Sea
- The analysis of the sufficiency of measures
- Potential cost-effectiveness analysis of new measures.

The task is to be carried out according to the BSAP update [Strategic Plan](#) (Adopted by HELCOM HOD 54-2017) and [Work Plan](#) (Adopted by HELCOM HOD 55-2018) and the [ToR for the HELCOM SOM Platform](#) (Agreed to by HELCOM HOD 55-2018).

In accordance with the HELCOM Ministerial Declaration 2018, the network will contribute to the achievement of UN Sustainable Development Goals and the Convention on Biological Diversity by developing regional approaches for the mapping, valuation, and analysis of ecosystem services and natural capital accounting.

¹ Including analyses on the use of marine waters and cost of degradation (art 8.1c), as well as cost-effectiveness and cost-benefit analyses in the programmes of measures (art 13.3).

The network will also continue to:

- Develop and agree on common principles for regional economic and social analyses
- Contribute to future assessments, as well as regional work on maritime spatial planning by better linking cost of degradation and the use of marine waters analyses, including economic indicators and as far as possible social indicators to MSP and initiating planning to incorporate future perspectives in the pressure and impact indices of HOLAS II to create scenarios of development of human activities and impacts on ecosystems
- In consultation with OSPAR ICG ESA, work with national and European statistical agencies and Eurostat to utilize the available data uniformly and to propose how, in case of Contracting Parties that are EU member states, Eurostat could generate data on economic indicators in regionally standardized format
- Identify the needs and possibilities to conduct regionally coordinated studies on the valuation of marine ecosystem services, cost-effectiveness analysis and cost-benefit analyses for collective approach/measures and support initiation of research projects in this field and propose new activities
- Follow similar developments in other Regional Sea Conventions and contribute to the European level work on ESA by exchanging information and sharing experiences e.g. on economic data
- Interact with research projects to explore ways to utilize the research knowledge and benefit from the project outcomes.

Participants

The expert network will consist of experts nominated by the Contracting Parties and will be open to Observers according to HELCOM procedures. Additional experts and representatives of organizations can be invited to the meetings.

The network will cater for cross-sectorial expertise to carry out the tasks as needed.

Working procedures

The expert network will function under and receive guidance from the HELCOM GEAR Working Group. The network will also interact with other groups/projects in HELCOM, and in particular coordinate the work in 2019-2020 with the HELCOM ACTION project. The network will also seek cooperation with the HELCOM-VASAB Maritime Spatial Planning Working Group.

The mode of work for the expert network will be physical meetings and via correspondence and tele-meetings. A chairperson for the network will be elected by the members of the network for a two-year period. The HELCOM Secretariat will provide administrative support to the network.
