

New attributes in Explorer database

Actions will be linked to:

- activities
- key type of measures
- information on how the action has changed over time (legacy)

Attachment 1 to document 4.4

Time table

- New attributes to the database – started
- Endorsement of interactive design – now. GEAR is invited to guide the further work and provide a recommendation.
- Implementation and programming of the updated Explorer – early spring 2020
- Updated reporting by countries on the implementation of actions from BSAP and MD 2010 and 2013 – mid-late 2020

Request to the meeting

With regard to the proposals in Annex 2, GEAR is specifically invited to consider the following options:

- Which overview table option to choose: 1. regional/country, or 2. joint/national (see p. 8–9)?
- What columns are most relevant to show in the overview table, in addition to action title and status assessment (see p. 6)? (room for a total of 7–8)
 - level of action (in the case of the regional level tab)
 - segment
 - topic (also consider other attributes, e.g. activities, pressures, category of action)
 - origin
 - target year
 - regional status for country/national tab?
 - others?

Requests to the meeting

GEAR is invited to consider if it is desirable to create figures based on selection of actions and attributes made by the user.

Requests to the meeting

| | | |
|---|--|---|
| <p>Understanding how the work done within BSAP connects to other goals, e.g. national environmental goals or SDGs</p> | <p>All, especially NGOs, media and researchers</p> | <p>Not available. This information is not included in the underlying database and is not possible to add within time and resources available to update the Explorer.</p> <p>Would a link to national environmental goals or SDGs be desirable feature for future updates of the Explorer?</p> |
| <p>Getting an overview of all actions:</p> <ul style="list-style-type: none"> ○ What has been reported since a specific time/year? | <p>Mostly NGOs, media, and researchers</p> | <p>Information not available. The underlying databases currently only holds information on the current situation. This feature could possibly be implemented in the future but it is not possible to back-track timing of reporting on already implemented actions.</p> <p>Is it desirable to follow evolvement of implementation over time? (noting that this feature cannot be met for past reporting)</p> |
| <p>Investigating individual actions more closely:</p> <ul style="list-style-type: none"> ○ Has it been completed? By what countries? When? | <p>All</p> | <p>Data partly available i.e. on what has been accomplished and by what countries. CPs have not been asked to inform when an action has been completed so the “when” cannot be accommodated based on existing data.</p> <p>Should countries in future reporting of national actions be asked to indicate when an action was completed?</p> |

Requests to the meetings

| | | |
|---|-----------------------------------|---|
| <p>Following up on actions of individual countries:</p> <ul style="list-style-type: none"> ○ What remains to do in this country? Why has it not yet been done? Who needs to do it? | <p>All, mainly media and NGOs</p> | <p>Data partly available. The user can filter the data to show what remains to do (not accomplished). Information on the why and who is however not requested when countries are reporting on the implementation.</p> <p>Should countries in the future be requested to report on why an action has not been implemented or who is responsible for the implementation?</p> |
|---|-----------------------------------|---|

| | | |
|--|------------------------------------|--|
| <p>Following up on the work in specific working groups</p> | <p>Mainly researchers and NGOs</p> | <p>This information is included in the underlying database but was not planned to be displayed directly in the table views. Instead it would only be included if the user chooses to download all associated data to the actions.</p> <p>Should responsible Working Group be displayed in table views on the web-pages?</p> |
|--|------------------------------------|--|
