

Planned outputs from the assessment

Assesment of biodiversity in the Second HELCOM Holistic Assessment

Integrated status in a map and in a graph.

Integrated confidence in a graph.

Other graphs:

- Integrated status of ecosystem components
- Integrated status of descriptors
- Trends of selected species

Outputs from the tool

What outputs are needed:

- **Elements in the Second HELCOM Holistic Assessment**
- **Reporting requirements for the MSFD**

Main outputs from the assessment tool

1. Integrated biodiversity status
2. Status per descriptor [for MSFD reporting]
3. Status per ecosystem component [for MSFD reporting]
4. Confidence of the integrated biodiversity status
5. Confidence per ecosystem component

Additional outputs from the assessment tool

6. Data and status per indicator
7. Indicators and status per GES criteria
8. Confidence on indicator level

Questions for the workshop

1. What elements of the biodiversity assessment should we include in the HOLAS II?
2. What outputs the BD tool should include?
