[IAEA main points regarding threshold values](#)

IAEA proposed some main points (as listed below) that should be considered and detailed in the proposal document for new threshold values for Radioactivity HELCOM Core Indicator

Core group established to work on new threshold values for Radioactivity HELCOM Core Indicator is invited to consider these issues when preparing proposals for new threshold values:

1. Definition of the criteria according to the exposure situation
2. Definition of radionuclides of interest
3. Definition of sub-regions of interest
4. Definition of representative person exposure scenario/pathway
5. Definition of reference plants and animals
6. Dose assessment methods (humans combined with flora and fauna)
7. Definition of method to interpret results (i.e. red, yellow, green)
8. Way forward and how IAEA can assist (based on the experience in OSPAR Convention and London Convention).
